

Dear Parents,

Date: 24.07.23

Greetings!

It has been observed that nowadays, Eye Conjunctivitis is prevailing and many parents & children are affected by it. Conjunctivitis, or pink eye, is an irritation or inflammation which covers the white part of the eyeball. Conjunctivitis can be **extremely contagious and is spread by contact with eye secretions from someone who is infected**. The infection will usually clear up in 7 days or more.

**If your ward has conjunctivitis, Please see to it that he/she should avoid attending the school as the child is in close contact with other people in the school & it is for the betterment of other students.**

**He/she may be allowed to remain at school with your doctor's FITNESS CERTIFICATE, if Conjunctivitis occurs.**

Expecting your support.

Principal.
